Project - Fashion Factory E-Commerce

The Fashion Factory E-Commerce project is an online platform designed to provide a seamless shopping experience for fashion enthusiasts. Built with a modern tech stack comprising React for the front end, PHP for the back end, and MySQL for the database, this application aims to offer a robust, user-friendly interface and efficient management of products, orders, and user data.

- Front End: React
    - React Router for navigation.
    - Redux for state management.
    - Axios for API requests.
    - Styled Components or CSS modules for styling.
- Back End: PHP
    - RESTful API design.
    - PHP frameworks like Laravel or Symfony (optional for more structured development).
- Database: MySQL
    - Relational database design.
    - Efficient data handling and queries.

The Fashion Factory E-Commerce project combines the power of React, PHP, and MySQL to create a feature-rich online shopping platform. With a focus on user experience, security, and performance, this application aims to provide a comprehensive solution for both customers and administrators in the fashion retail space.
